

# FRUITING

Foliar blend for optimising plant fruit processes

**NutriMAX Fruiting contains a blend of nutrients, trace elements and natural plant stimulants essential for fruit production in all broadacre crops and horticulture.**

**The nutrient blend has been selected specifically to stimulate a plants fruiting processes, ensuring plant energies are directed towards the fruit not just foliage growth.**

**In addition to the essential fruiting nutrients the product also has natural uptake and buffering agents including kelp, fulvic acid, microbial metabolites and enzymes and amino acids.**

**NutriMAX Fruiting also contains a natural wetting agent for spray efficiency.**

## Typical Analysis (w/v):

Ammonium N	2.4%	Boron	0.43%
Total N	5.5%	Calcium	1200mg/L
Phosphorus	10.0%	pH	4.8
Potassium	5.7%		
Magnesium	1.8%		
Sulphur	2.6%		
Manganese	0.66%		

## Do you Know?

Different forms of Nitrogen are used by plants during different growth stages.

E.g. Ammonium Nitrogen (NH<sub>4</sub>) will aid plant fruiting processes, while Nitrate Nitrogen (NO<sub>3</sub>) will promote foliage growth.

## Application of Fruiting:

	Rate / Ha	Timing
<b>Foliar</b>	<b>Apply when a deficiency has been identified by tissue, petiole or SAP analysis</b>	
Cereals	2-8 L	From late tillering to early ear emergence (Zadoks GS 29 to 50)
Canola	2-8 L	Stem elongation to Flower bud development
Legumes (Beans/Peas/Lupins)	2-8 L	V4 4th trifoliate leaf unfolded to R1 early bloom
Pasture	3-5 L	Spray mid growth to aid flower initiation and set
Lucerne	2-5 L	For seed production, apply after final hay cut when adequate leaf area exists ~ Pre-flowering
Citrus	7-10 L	Spring Flush ~ 2/3 leaf expansion ~ Summer Flush ~ Autumn Flush
Vines	7-10 L	4-6 weeks post budburst ~ Pre-flowering * application after fruit set should be based on K needs as determined by a leaf test
Potatoes	7-10 L	Apply at full leaf emergence ~ Tuber initiation
Onions	7-10 L	Apply at full leaf emergence ~ 4-5 leaf ~ Early bulbing
Carrots	7-10 L	Mid vegetative growth ~ Active root bulking
<b>BioMAX Fulvic</b>	1-3 L	Optional for increased plant uptake

Rates and timings may change depending on crop and season.  
Always consult a LawrieCo consultant or distributor for specific recommendations.

## Benefits of Fruiting:

- Specific blend to enhance plant reproductive processes
- Natural wetting agent
- Increase flower numbers and fruit set
- Natural plant stimulants
- Balances plant energy from foliar growth to fruit production

## Further Information:

- Available in 20L, 200L, 1000L
- Check label for more detailed application and handling information.
