

# BioLogic WaterBuff

## Makes Every Drop Count

For use in these programs:

### Include BioLogic WaterBuff in Every Irrigation

**WaterBuff contains all natural ingredients and uses microbial technology to enhance water uptake.**

**WaterBuff uses a natural wetting agent to assist plant uptake of water and a botanical tenside to lower surface tension.**

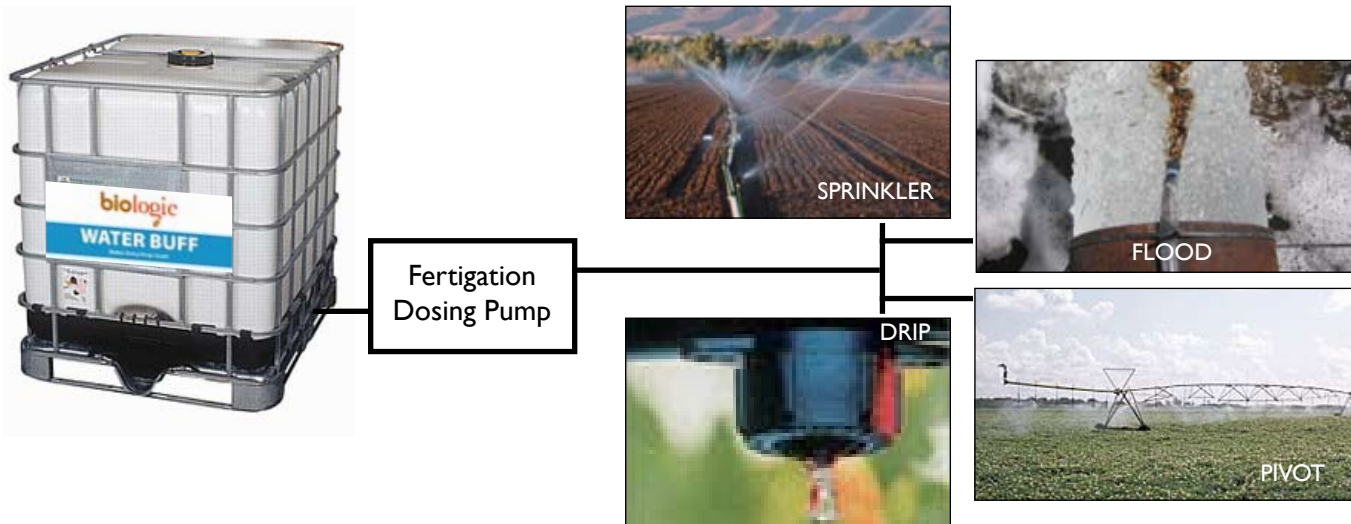

- WaterBuff reduces the amount of irrigation water required by optimising the plant water uptake.
- WaterBuff will buffer the plant and soil from high salt, chlorine and minerals in water.
- WaterBuff boosts plant growth and aids in the uptake of soil or fertigated nutrition.
- WaterBuff will over time build beneficial biology in soil.
- WaterBuff can prevent and reduce mineral build-up and calcified crust in irrigation lines
- Continued use of WaterBuff will detoxify soil chemical residues.

#### What is WaterBuff?

WaterBuff is made of all natural ingredients and contains microbial metabolites, wetting agents, a botanical tenside and is a strong electrolyte.

#### Benefits of WaterBuff

- Improve water efficiency
- Buffer plants and soil against high salt, chlorine and mineral content in water
- Plant uptake of nutrients
- Promote beneficial soil biology
- Can reduce mineral build-up in irrigation lines
- Ongoing use detoxifies soil chemical residues

#### Application Rates:

Apply 1-3 L/ha with every irrigation  
Meter WaterBuff slowly throughout the entire irrigation.

#### Further Information:

- Suitable for use with all water sources including bore, dam, rainwater & chlorinated.
- Suitable for use with fertigation systems including pivot, flood, drip and sprinklers.
- This product will not block irrigation lines, however it may dislodge crust that needs to be flushed to avoid blockages.
